Limit upload_file_size en Virtualmin

By mar10

Con virtualmin & webmin para establecer el max , min en megas de los archivos que pueden subir al server no basta con editar el php.ini ya que cada servidor virtual tiene su propio archivo y cada uno puede tener una configuración distinta. Desde el propio panel tenemos acceso a esta opción. Capturas de pantalla:

The image consists of two screenshots from the Virtualmin Webmin interface, illustrating the steps to access the PHP configuration settings.

Top Screenshot: System Overview

The top screenshot shows the 'System' overview page. The left sidebar contains a menu with 'PHP 5 Configuration' highlighted with a red circle. A red arrow points from this menu item to the 'System' overview page. The main content area displays system information:

- System hostname: marspain.sytes.net (127.0.1.1)
- Webmin version: 1.620
- Theme version: 8.7
- Kernel and CPU: Linux 2.6.32-5-amd64 on x86_64
- Running processes: 109
- Virtual memory: 671.99 MB total, 0 bytes used
- Package updates: All Virtualmin packages are up to date. 1 updates to system packages are available.
- Operating system: Debian Linux 6.0
- Virtualmin version: 3.99.gpl GPL
- Time on server: 28/Mar/2013 17:46, Up 0 hours, 1 minutes
- CPU load averages: 0.00 (1 min) 0.00 (5 mins) 0.00 (15 mins)
- Real memory: 1.97 GB total, 622.64 MB used
- Local disk space: 14.12 GB total, 2.70 GB used

Bottom Screenshot: Manage PHP Configuration

The bottom screenshot shows the 'Manage PHP Configuration' page for the file `/home/marspain/etc/php5/php.ini`. The left sidebar shows 'PHP 5 Configuration' selected. The main content area displays various configuration options, with 'Resource Limits' highlighted by a red box. A red arrow points from the 'Resource Limits' box back to the 'PHP 5 Configuration' menu item in the sidebar.

Service	Up?	Actions	Service	Up?	Actions
Apache Webserver	✓	✗	SSH Server	✓	✗
BIND DNS Server	✓	✗	ClamAV Virus Scanning Server	✓	✗
Postfix Mail Server	✓	✗	SpamAssassin Filter Server	✓	✗
Dovecot IMAP / POP3 Server	✓	✗	MySQL Database Server	✓	✗
ProFTPd FTP Server	✓	✗	PostgreSQL Database Server	✓	✗
